General

The air-insulated switchboards of F 24 (F 600) type consist of insulated, type-tested panels, with one common bus bar system.

The switchboards and load disconnector used meet the requirements of the EN 62271-1, EN 62271-102, and EN 62271-200 standards. The resistance to accidental arcs of the switch panels has been determined at 16 kA; 1 s (PEHLA tests), by and independent testing institute.

The switchboards are equipped with the H 27 F type load disconnectors. The earthing switches used feature short-circuit making capability, and are provided with interlocking.

The small installation area makes switchboard panels especially suitable for installation into small rooms. The welded structure of the frames and the supporting parts is painted with two varnish layers. The panel features either one single HV space with fixed cladding installed in the bus bar area, or is equipped with separated terminal box with one-wing doors.

The panel front side is provided with one-wing metallic doors (with hinges on the right or left side, by customer request), with mimic diagram drawn on them, and with sight window made of glued

multilayer safety glass. In standard the doors and the bus bar covers are painted in RAL 2004 (orange) or RAL 7032 (grey) colour.

From the rear part all the panels are covered with 2 mm galvanized sheet. From the left side is each panel equipped with PE 5 mm insulation plate stiffened with glass fibres and provided with bushings. The switchboard sides have metallic sheets casing (on the right side including the PE insulation plate).

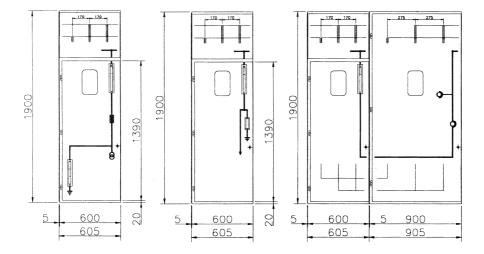

The panels are equipped with a central lock, which uses a special-type key to DIN 43668, size 5. The safety windows in the doors provide safe inspection of devices.

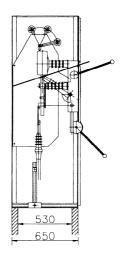

An insulating protective plate can be inserted when the panel door is closed.

The design and the set out of the panels are based on building-block principle. This provides the possibility of customer specific arrangements and also provides for later changes in the switchboard configuration. On request the switchboards can be provided with accessories such as the bases, consoles for mounting of instrument transformers, electric motor drive units, cable compartments etc.

F 24 (F 600) panel

Switch panel types				
Type	Designation	Weight in kg		
FK	cable panel	153		
FT	transformer feeder panel	166		
FP	transition panel – right hand side	178		
FP	transition panel – left hand side	178		
FM1	measuring panel	123*		
FM2	measuring panel (with cable outlet)	128*		
FH	upper outlet	107		
-	end face	21		

^{*} weight without instrument transformers

Accessories

- 2 end faces, left and right hand sides (27 mm)
- 1 manual drive lever for the load disconnector (500 mm long)
- 1 manual drive lever for the earthing switch (365 mm long)
- 1 door key, double-side, to DIN 43668, size no. 5
- 1 FRP withdraw able plate, red, type 1165
- bus bars 630 A, of round profile φ18 mm, made of insulated copper

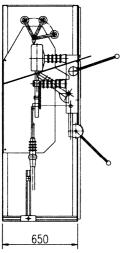

Available auxiliary equipment

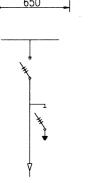

- · earthing switches with short-circuit making capability and mechanical interlocking
- cable panel with surge voltage protector
- · transformer panel with working current trip
- cable panel with electric motor drives
- cable panel with measurement loop
- capacitive voltage sensors
- mounting of fuse boxes into the incoming or measurement panel
- cable panel with 630 A load disconnector
- mounting of short-circuit current indicators
- · cylindrical locks, lockable drive units
- base (200 or 220 mm high)

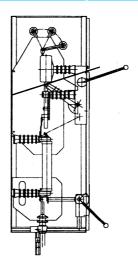

Cable panel FK

Transformer panel FT

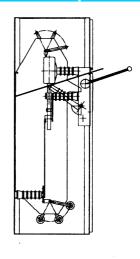

Transition panel FP

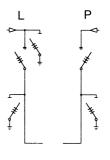

Measuring panel FM1

Measuring panel FM2

Upper outlet FH
